Summary

I am a software developer focused on full-stack web applications. I enjoy delivering excellent products and services on both web and mobile. I am a self-starter, I enjoy being part of a collaborative team, and talking to stakeholders. I am a quick learner and have strong problem-solving skills. Additionally, I have experience in quite a wide variety of projects, and I am sure I can quickly start adding value to the industry. I am keen to secure a position after taking some time out to travel and undertake a part-time CS master's program to make me more rounded and focused.

Skills (relative strength by size)

Experience

Morta (Apr 2020 - Nov 2020) - Full-Stack Developer

I worked as the first employee at this startup, a company that provides a web application for managing the intricacies of large civil-engineering projects and the many contractors involved. I was working with React, TypeScript, and Django on Python, day to day.

Green Custard (Nov 2018 - Nov 2019) - Full-Stack Consultant

Green Custard is a consultancy that creates bespoke mvp style web applications. I worked on apps for HSBC, JLL, Joint Analytics, and Verizon. My time here involved a lot of Typescript, React, and Vue. The company was an extremely close partner with AWS, so we made use of a lot of its services, such as Lambda, S3, Cognito, etc.

The Lettings Hub (Nov 2016 - Apr 2018) - Software Developer

At The Lettings Hub I worked on an insurance platform that managed landlords property insurance, and this was integrated into the onsite call centre. This was a LAMP stack.

Education

- **University of Keele - Computer Science and Artificial Intelligence MSc**
(Jan 2021 - Present, part-time, online)
- **University of Bath - Natural Sciences MSc** (2014 - 2016) (Uncompleted)
- **A Levels - A*A*A/A** (Achieved 2014)
- **Certifications:**
